QUANTITATIVE METHODS FOR BUSINESS AND MANAGEMENT

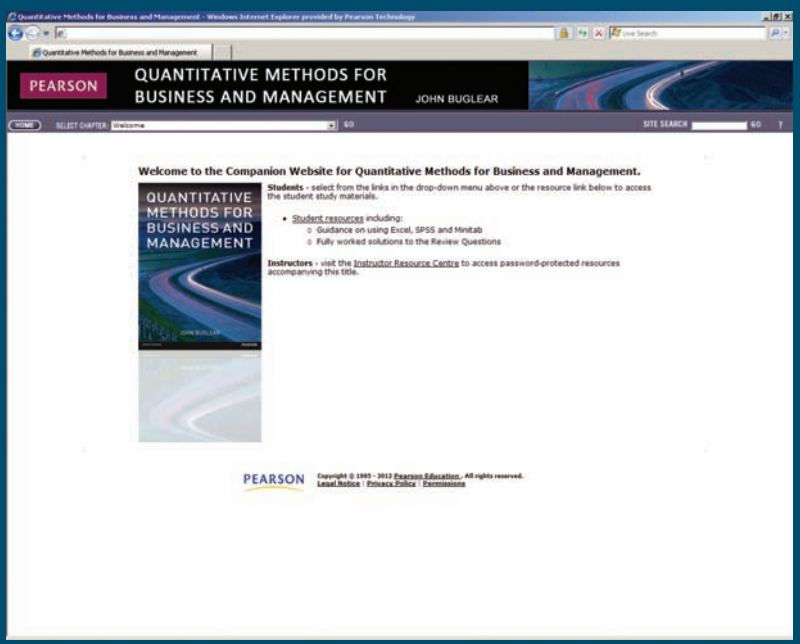
Visit the *Quantitative Methods for Business and Management* Companion Website at **www.pearsoned.co.uk/buglear** to find valuable student learning material including:

- Guidance on using Excel, SPSS and Minitab
- Fully worked solutions to the Review Questions



Quantitative Methods for Business & Management

Table of Contents

Cover
Quantitative Methods for Business and Management
Contents
List of self-assembly guides
Introduction: the Quantitative Methods road map
Guided tour
Acknowledgements
Rules of the road the basic techniques
- Introduction
- Quantitative methods, numbers and business
- Whats in this book?
- Key arithmetical procedures
- Review questions

Straight ahead linear models
- Reality check : Business use of break-even analysis and linear programming
- Introduction
- Linear equations
- Simultaneous equations
- Break-even analysis
- Inequalities
- Linear programming
- Review questions

Around the bend dealing with the curves
- Reality check: Business use of the EOQ model
- Introduction
- Simple forms of non-linear equations

Pearson

Table of Contents

Basic differential calculus
The Economic Order Quantity (EOQ) model
Review questions

Filling up fuelling quantitative analysis
Reality check: Business use of tabulation
Introduction
Important statistical terms
Sources of data
Types of data
Arranging data
Review questions

Good visibility pictorial presentation of data
Reality check: Business use of pictorial presentation
Introduction
Displaying qualitative data
Displaying quantitative data
Portraying bivariate quantitative data
Portraying time series data
Review questions

General directions summarising data
Reality check: Business use of summary measures
Introduction
Measures of location
Measures of spread
Summary measures in quality management
Review questions

Two-way traffic investigating relationships between two variables using correlation and regression
Reality check: Business use of quantitative bivariate analysis
Introduction
Correlation

Table of Contents

- Simple linear regression
- Review questions

Counting the cost summarising money variables over time

- Reality check: Business use of price indices and investment appraisal
- Introduction
- Index numbers
- Review questions

Long distance analysing time series data

- Reality check: Business use of time series analysis and forecasting
- Introduction
- Components of time series
- Classical decomposition of time series data
- Exponential smoothing of time series data
- Review questions

Is it worth the risk? introducing probability

- Reality check: Business use of probability
- Introduction
- Measuring probability
- The types of probability
- The rules of probability
- Tree diagrams
- Review questions

Finding the right way analysing decisions

- Reality check: Business use of decision analysis
- Introduction
- Expectation
- Decision rules
- Review questions

Accidents and incidence discrete probability distributions and simulation

- Reality check: Business use of discrete probability distributions and

Table of Contents

simulation
Introduction
Simple probability distributions
The binomial distribution
The Poisson distribution
Simulating business processes
Review questions
Smooth running continuous probability distributions and basic queuing theory
Reality check: Business use of the normal distribution
Introduction
The normal distribution
The standard normal distribution
The exponential distribution
A simple queuing model
Review questions
Getting from A to B project planning using networks
Reality check: Business use of critical path analysis and PERT
Introduction
Network analysis
Critical path analysis
The programme evaluation and review technique (PERT)
Cost analysis: crashing the project duration
Review questions
Taking short cuts sampling methods
Reality check: Business use of sampling
Introduction
Bias in sampling
Probabilistic sampling methods
Non-probabilistic sampling methods
Test driving sampling theory, estimation and hypothesis testing

Table of Contents

- Reality check: Business use of small sample inference, the origins of the t distribution and testingpopulation proportions
- Introduction
- Sampling distributions
- Statistical inference: estimation
- Statistical inference: hypothesis testing
- Review questions

High performance statistical inferencefor comparing population means andbivariate data

- Reality check: Business use of contingency analysis and ANOVA
- Introduction
- Testing hypotheses about two population means
- Testing hypotheses about more thantwo population means one-way ANOVA
- Testing hypotheses and producing interval estimatesfor quantitative bivariate data
- Contingency analysis
- Review questions

Going off-road managing quantitative research for projects and dissertations

- Introduction
- Using secondary data
- Collecting primary data
- Presenting your analysis

Statistical and accounting tables

- Present values
- Binomial probabilities and cumulative binomial probabilities
- Poisson probabilities and cumulative Poisson probabilities
- Random numbers
- Cumulative probabilities for the standard normal distribution
- Selected points of the t distribution
- Selected points of the F distribution

Pearson

Table of Contents

Selected points of the chi-square distribution
Answers to review questions
Index

Pearson
